Subject index

Apparatus
– for growth kinetics probing
– – by real time phase shift interferometry 387
– for highly reactive intermetalics
– – of uranium nickel oxide 621
– for melt growth
– – by fractional suspension 248

Cadmium 208
– sulphide 133
Cellular growth
– of binary alloys 265
Characterization
– by X-ray diffraction
– – of organic crystals 729
Computer simulation
– of convection patterns 45
– of solute segregation 320
– of ternary compounds distribution 74
– of underpotential deposition 253
Constitutional supercooling
– of binary alloys 265
Convection 45, 74, 190, 320, 333, 516, 686

Dendritic growth
– of binary alloys 265
– of cupric chloride 716
– of lead molybdate 725
Device characterization
– electroluminescent 157
– electronic materials 107, 406, 429, 616
– lasers 176, 180
– quantum wells 502

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 508, 586, 766
– hydrogen 391
– photolithographic 508

Gallium
– aluminum arsenide 421, 452
– antimonide 415
– arsenide 17, 421, 434, 543, 557
– indium phosphide 8
– nitride 1, 458

Hydrodynamics, see Convection

Indium
– aluminum arsenide 468
– arsenide 440
– gallium arsenide 74, 357, 397, 406, 468
– gallium arsenide phosphide 446, 525
– phosphide 468

Kinetics
– of aggregation 738
– of growth 17, 87, 221, 260, 440, 508, 543, 570, 693, 701, 719, 773

Lasers, see Device characterization
Lasers, crystals for
– garnets 180
Lysozyme 221, 738

Melt growth technique
– by Bridgman–Stockbarger method
– – of bismuth antimonide 277
– – of indium gallium arsenide 357
– – of lead bromide 107
– – of lithium calcium aluminum fluoride 176
– – of mercury cadmium telluride 87
– – of silver bromide 107
– – theory of
– – – ampoule tilting effects 292
– – – solute segregation 45, 320
– by Czochralski method
– – of europium vanadate, lutetium vanadate 369
– – of lead molybdate 686
– – of silicon 361
– – of uranium nickel borate 621
– by eximer laser melt mixing
– – of silicon germanium 32
– by floating zone method
– – of lanthanum borate 333
– – of lanthanum calcium manganese oxide 365
– – of lanthanum strontium manganese oxide 365
– by fluidizid bed

– – of epsilon-caprolacton 248
– – of mercury cadmium telluride 478
– by gradient solidification method
– – of sapphire 183, 190
– by laser heated pedestal
– – of strontium barium titanate 660, 670
– by micro-cooling down
– – of silicon germanium 38, 64
– by uniaxial solidification
– – of binary alloys 265
– – of bismuth antimonide 277
– – of 4′-nitrobenzylidene, 3-ethylcarbonylamino, 4-methoxyaniline 373
– – of silver gallium sulphide 616
– by zone melting
– – of lanthanum calcium manganese oxide 365
– – of lanthanum strontium manganese oxide 365
Mercury
– cadmium telluride 87, 493
Microgravity, growth under
– of dendritic growth 777
– of indium gallium arsenide 357
Morphological stability
– of bismuth titanium oxide 638
– of calcium oxalate dihydrate 748
– of calcium oxalate monohydrate 748
– of gallium arsenide 440
– of growth interface 305
– of indium arsenide 440
– of n-methyl urea 701
– of silicon carbide 586, 596
– of silicon germanium 24

Nucleation
– of inoxide glasses 756
– of lysozyme 738
– of ribonuclease 212
– of silicon carbide 607
Numbers
– Marangoni 64, 190
– Peclet 777
– Rayleigh 190, 320
– Tylor 45

Phase diagram
– of alumina yttria 165
– of bismuth oxide–germanium oxide 171
– of lead iron tungstate 628
Polymers
– of hydrocarbons 237
Precursor
– for aluminum nitride 1
– for cadmium sulphide 133
– for gallium nitride 1
Purification of materials
– of cadmium 208

Quantum wells, see Device characterization

Silicon 361, 516
– carbide 586, 596, 607
– germanium 24, 32, 38, 64, 495, 508
Solid growth technique
– by annealing
– – of mercury cadmium telluride 87
Solution growth technique
– by aqueous
– – of amorphous iron sulphide 719
– – of lead molybdate 725
– by flux method
– – of HTSC 102
– – of lead iron tungstate 628
– – of potassium titanyl phosphate 681
– by low temperature method
– – of n-methyl urea 693, 701, 709
– – of ribonuclease A 212
– – of RNA polymerase 734
– – of thyroxyaptite 773
– – of zinc oxide 649
– by sol–gel
– – of lead zirconate tantalate 644
– by top seeded solution
– – of bismuth titanium oxide 638
Stefan problem or moving boundary
– of dendritic growth 383, 777
Superconductivity materials, high T_c
– bulk
– – of TLSBCCO 93
– – of 2212 type 102
– – of YBCO 102, 566
– film
– – of BSCCO 570
Superlattices, multilayers
– of HTSC 93
– of iron/iridium 143
– of silicon germanium/silicon 502

Thin film growth, epitaxy
– by hot wall epitaxy
– – of bismuth telluride 122
– – of copper indium selenide 769
– – of zinc selenide 473
– by liquid phase electroepitaxy
– – of III–V compounds 305
– by liquid phase epitaxy
– – of silicon 516
– – of III–V compounds 74
– – of YBCO 566
– by magnetron sputtering
– – of barium titanate 157
– – of zinc sulphide 157
– by molecular beam epitaxy
– – of aluminum gallium arsenide 406
– – of barium fluoride 111
– – of calcium fluoride 111
– – of gallium arsenide 440
– – of indium aluminum arsenide 468

– – of indium arsenide 440
– – of indium gallium arsenide 406, 468
– – of indium gallium arsenide phosphide 446
– – of indium phosphide 446, 468
– – of silicon germanium 495, 502, 508
– by spray pyrolysis
– – of nickel oxide 656
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of silicon carbide 607
– – through metalorganic chemical vapor deposition
– – – of aluminum gallium antimonide 415
– – – of aluminum gallium arsenide 406, 421, 434, 452
– – – of aluminum nitride 1
– – – of cadmium sulphide 133
– – – of cadmium telluride 488
– – – of gallium antimonide 415
– – – of gallium arsenide 17, 421, 429, 434, 543, 557
– – – of gallium indium arsenide 8, 406
– – – of gallium nitride 1
– – – of indium gallium arsenide 397
– – – of indium gallium arsenide phosphide 525
– – – of indium phosphide 8
– – – theory of compositional uniformity 525
– – through pulsed laser deposition
– – – of barium sodium niobate 378

Vapor growth technique
– by evaporation and condensation
– – of calcium carbonate 260
– – of carbon 580
– – of copper chloride 612
– – of silicon carbide 586, 596
– – of silver gallium sulphide 151
– – of strontium gallium sulphide 129
– – of zinc telluride 534
– by halide transport
– – of gallium nitride 458

Whisker growth
– of BSCCO 570
– of silicon carbide 607

Zinc
– selenide 473
– telluride 534
